

## Grafisk Profile

by Salah Uddin (Diploma in Frontend)

### Typography:

I will use easy to read fonts like Sans-serif and Helvetica.

### Color:

I will use a **lighter** background color so that users feel comfortable. I will use **black** as the main font color to keep it simple. Background color will be white (or very light color which is almost as close to pure white).

### Image:

I will use images so that visitors can get an idea about the content quickly.

### Navigation:

Navigation will be visible on top of the page (when browsing from a large screen). Visitors will be able to find anything within one to two clicks.

**Mobile friendly site:** I will put maximum effort so that people can see the site easily from any kind of mobile devices. I will make sure- users can find relevant information. I will for example- use Hamburgarmenu on the right side så user can easily use their right hand.

### Motivation behind my choices:

Good design helps convey the content. I want to make sure that all use of typography, images, color and shape plays a role to convey the content nicely.

My main motivation is so that the user quickly understands the purpose of the application and how to navigate and search within the site.

I will make the UI better so that content is very easy to understand and easy to use.

I will make sure users get a good experience when they visit the site and have a positive feeling about the organization.
